DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/10/05 has been entered.

Allowable Subject Matter

2. Claims 1-49 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance is the inclusion of limitations to the effect that the silicide layers have local metal-rich areas from which metal oxynitride extrusions project. The prior art of record (see JP 06-021440 to Abiko) teaches semiconductor gate structures having a polysilicon layer, a tungsten silicide layer thereon, and a titanium silicide layer on the tungsten silicide layer, as claimed. Abiko, however, does not teach the presence of local metal-rich areas from which metal oxynitride protrusions extend. There is some evidence in the prior art (see U.S. Patent No. 4,957,590 to Douglas or 6,013,569 to Lur) that silicide processes will leave unreacted metal layers that subsequently form nitrides or oxynitrides, and that such layers can be removed by etching. These references, however, only teach entire layers of unreacted metal, and

do not in any way anticipate small-scale local metal rich areas on the side of a silicide layer from which oxynitride filaments project. Hence, due to the differences expected in the motivations and methods for removing an entire layer of metal nitride evenly covering a silicide layer and the motivations and methods for removing small local filaments of metal oxynitride projecting directly from a silicide layer, the teachings of Douglas or Lur cannot be applied against the presently amended claims.

Since the present invention addresses a known problem in the art of localized shorting of small-scale devices from small oxynitride filaments projecting from the sides of silicide layers, and since the prior art does not teach the claim limitations addressed supra, it is the examiner's opinion that the claimed invention would not have been obvious to a person having ordinary skill in the art.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
